CAREER PROFILE

I'm a Web Developer with 3+ years of experience designing, developing, and maintaining high-performance websites and web applications. I'm skilled in building responsive digital platforms, integrating RESTful APIs, and optimizing web performance to improve user experience and engagement. I'm experienced in modern JavaScript frameworks, CMS-driven websites, UI/UX implementation, and analytics integration. I'm excellent at translating business requirements into scalable web solutions that support digital growth, customer interaction, and operational efficiency.

SKILLS

Web Development: HTML5, CSS3, JavaScript (ES6+), TypeScript, Responsive Web Design

Frameworks & Libraries: React.js, Next.js, Angular, React Native

CMS & Web Platforms: WordPress, CMS customization, website content management

API Integration: RESTful APIs, AJAX, API authentication, third-party integrations

UI/UX & Design: User Interface Development, UX Optimization, Cross-Browser Compatibility

Performance & Analytics: SEO Optimization, Google Analytics, Firebase Analytics, Performance Optimization

Tools & Infrastructure: Git, CI/CD, Agile/Scrum, Application Security

WORK EXPERIENCE

Web Developer

Ela Techlabs – Nairobi

2024 – Present

- I increased user engagement by 25% by developing and enhancing 15+ responsive website and web application features using modern JavaScript frameworks and UX optimization techniques.
- I improved website performance by 35–45% faster page load times by implementing lazy loading, code splitting, and asset compression strategies.
- I reduced front-end API errors by 30% by integrating and optimizing RESTful API communication between front-end interfaces and backend services.
- I strengthened application security by implementing secure input validation and client-side protection mechanisms, which reduced potential cross-site scripting vulnerabilities.

- I increased feature adoption by 20% by integrating Google Analytics and Firebase Analytics to enable data-driven improvements to website functionality.
- I reduced development time for new website features by 30% by creating reusable UI components and modular front-end architecture.
- I accelerated deployment cycles by 40% by implementing Git-based CI/CD workflows and improved development collaboration practices.
- I improved code quality and reduced post-release defects by 25% by conducting structured peer code reviews and enforcing front-end development standards.

Junior Web Developer

Syscraft Limited – Nairobi

2022 – 2023

- I improved enterprise web platform usability by 20% by optimizing front-end interfaces and responsive layouts for ERP web modules used by multiple clients.
- I reduced manual processing workflows by 15% by integrating web interfaces with backend systems using REST APIs and AJAX.
- I increased system stability and cross-browser compatibility by implementing optimized DOM manipulation and UI performance improvements.
- I improved issue resolution turnaround time by 30% by documenting and escalating 25+ technical issues and collaborating with vendors on system fixes and improvements.
- I enhanced platform maintainability by implementing structured front-end code practices and version control using Git.

EDUCATION

The Catholic University of Eastern Africa

Bachelor of Science – Actuarial Science With IT

Relevant Coursework:

Programming Fundamentals | Web Design | Statistical Computing | Statistical Data Analysis

ADDITIONAL STRENGTHS

- Website performance optimization
- API integrations & system connectivity
- Digital analytics and SEO optimization
- Security-focused web development
- Collaboration with marketing and design teams
